

## Unilateral Leg Press

Our Unilateral Leg Press is the ideal unit for individual Leg Training and is fully capable of providing the lifter with equal strength development. The dual carriage assemblies can function independently or can also be locked together for traditional Leg Presses. The dual center load carriages provide a smaller footprint extending less than 5" from each side of the machine. Four sets of oversize linear bearings and supported case hardened shafting insure silky smooth operation and able to handle maximum poundage.

Built for strength, this frame is constructed using a 2" x 4" rectangle tube base with an oversized 3" x 3" square tubing main frame.

MODEL: PF311U  
FOOTPRINT: W 44", L 80"  
SHIPPING WEIGHT:: 730 lbs.
